DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Baldwin (6,025,853).

Baldwin teaches a graphics accelerator (Fig. 2E) comprising a plurality of specialized processing subunits (Fig. 2C), interconnected through a serial message-passing interface (the bus connects between these units) to provide a generally pipelined graphics accelerator architecture; at least one of said specialized processing subunits comprising multiple subprocessors connected to operate in parallel on separate tasks (col. 64, lines 39-40); a high bandwidth memory interface which interfaces to a local buffer of said graphics accelerator (col. 64, lines 36-37); wherein said serial interface also permits downloading of image data to one of said subunits (col. 64, lines 30-35). Therefore, at least claims 1 and 3 are anticipated by Baldwin.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baldwin (6,025,853) in view of Manze et al (5,675,826 hereinafter "Manze").

The teachings of Baldwin are given in previous paragraph of this Office action. However, Baldwin fails to explicitly teach or suggest said memory interface accesses multiple tiles of pixels simultaneously. This is what Manze teaches (col. 1, lines 60-67). It would have been obvious to one of ordinary skill in the art at the time the present invention was made to combine the teachings of Manze into the system of Baldwin in order to simultaneously access multiple memory blocks in the tiled memory unit and thus to provide improved access to larger arrays of pixel data as taught by Manze (col. 1, line 49 through col. 3, line 43). Therefore, at least claims 2 and 4 would have been obvious.
